the general public often views early childhood education as either simply babysitting or as preparation for later learning of course both viewpoints are simplistic deep understanding of child development best educational practices based on development emergent curriculum cultural competence and applications of family systems are necessary for high quality early education highly effective early childhood education is rare in that it requires collaboration and transitions among a variety of systems for children from birth through eight years of age the sage encyclopedia of contemporary early childhood education presents in three

comprehensive volumes advanced research accurate practical applications of research historical foundations and key facts from the field of contemporary early childhood education through approximately 425 entries this work includes all areas of child development physical cognitive language social emotional aesthetic as well as comprehensive review of best educational practices with young children effective preparation for early childhood professionals and policy making practices and addresses such questions as how is the field of early childhood education defined what are the roots of this field of study how is the history of early childhood education similar to yet different from the study of public education what are the major influences on understandings of best practices in early childhood education

this is a book about the development of action and skill in the first years of life but it differs in an important way from most past treatments of the subject the present volume explores how the development of action is related to the contexts especially the social ones in which actions function in past work little attention has focused on this relationship the prevailing view has been that infants develop skills on their own independent of contributions from other individuals or the surrounding culture the present volume is a challenge to that view it is based on the premise that many early skills are embedded in interpersonal activities or are influenced by the activities of other individuals it assumes further that by examining how skills function in interpersonal contexts insights will be gained into their acquisition and structuring in effect this volume suggests that the development of cognitive perceptual and motor skills needs to be reexamined in relation to the goals and contexts that are inherently associated with these skills the contributors to the volume have all adopted this general perspective they seek to understand the development of early action by considering the functioning of action in context our motivation for addressing these issues stemmed in part from a growing sense of dissatisfaction as we surveyed the literature on skill development in early childhood

most parents today have accepted the message that the first three years of a baby's life

determine whether or not the child will grow into a successful thinking person but is this powerful warning true do all the doors shut if baby s brain doesn t get just the right amount of stimulation during the first three years of life have discoveries from the new brain science really proved that parents are wholly responsible for their child s intellectual successes and failures alike are parents losing the brain wars no argues national expert john bruer in the myth of the first three years he offers parents new hope by debunking our most popular beliefs about the all or nothing effects of early experience on a child s brain and development challenging the prevailing myth heralded by the national media head start and the white house that the most crucial brain development occurs between birth and age three bruer explains why relying on the zero to three standard threatens a child s mental and emotional well being far more than missing a few sessions of toddler gymnastics too many parents educators and government funding agencies he says see these years as our main opportunity to shape a child s future bruer agrees that valid scientific studies do support the existence of critical periods in brain development but he painstakingly shows that these same brain studies prove that learning and cognitive development occur throughout childhood and indeed one s entire life making hard science comprehensible for all readers bruer marshals the neurological and psychological evidence to show that children and adults have been hardwired for lifelong learning parents have been sold a bill of goods that is highly destructive because it overemphasizes infant and toddler nurturing to the detriment of long term parental and educational responsibilities the myth of the first three years is a bold and controversial book because it urges parents and decision makers alike to consider and debate for themselves the evidence for lifelong learning opportunities but more than anything this book spreads a message of hope while there are no quick fixes conscientious parents and committed educators can make a difference in every child s life from infancy through childhood and beyond
